

ClearPath Recovery

A UiPath Maestro Case workflow that prevents telecom service cases from closing until authoritative evidence proves recovery.

Track 1 · Maestro Case · Governed Telecom Recovery

Problem statement and proposed solution

Problem

Telecom service recovery can look complete in CRM, order, billing, and support systems while the customer still lacks working service. The danger is wrongful closure, repeat contact, SLA exposure, and an audit trail that cannot explain why the case closed.

Solution

ClearPath Recovery uses agents to interpret ambiguous evidence into structured signals, deterministic policy to decide whether closure is allowed, Maestro Case to route dynamic exceptions, Action Center for human review, and Data Fabric/Orchestrator for durable audit proof.

Agents interpret. Policy decides. Maestro routes. Humans own exceptions.

Benefits and technologies used

End user	Telecom service recovery teams, activation/restoration owners, exception reviewers, audit/compliance teams.
User department	Customer operations, network operations, field operations, service assurance, compliance.
Industries	Telecom, broadband, managed connectivity, enterprise service operations.
UiPath products used	Maestro Case, Action Center, Orchestrator, Data Fabric, Test Manager, UiPath CLI.
Other integrations / APIs	Simulated CRM/order, billing, network telemetry, inventory, dispatch, support notes; optional Gemini/Vertex LLM interpreter.
Benefits: fewer wrongful closures, lower repeat contacts, better SLA control, safer agent adoption, and an auditable chain from raw agent recommendation to policy decision to human action.	

Solution architecture

Track 1 fit: unpredictable evidence-driven routes, human-in-the-loop decisions, exception handling, visibility, and auditability.

Running proof and repository

Review service recovery evidence

CASE-BG-CONTRA / SVC-BG-1

BUSINESS STATE	green	EVIDENCE STATE	contradicting	BLOCK REASON	source_contradiction
----------------	-------	----------------	---------------	--------------	----------------------

RAW AGENT RECOMMENDATION	POLICY DECISION	FINAL ROUTE	CLOSURE GUARD	POLICY VERSIONS
closure_candidate	require_human_review	human_review	source_contradiction	ip-v1 / dp-v1

RAW AGENT INTERPRETATION EVENT

closure_candidate

Escalated exception review

closure_candidate -> human_review

source_contradiction

UiPath platform role

Maestro Case and Action Center own lifecycle, assignment, completion, and reviewer return. This custom packet is the legible audit/evidence surface because the generated Action Center page hid or mislabeled proof-critical fields during validation.

Agent and policy boundary

Raw agent interpretation		Final policy decision	
Event	AIE-E004	Event	PDE-E-004
Recommendation	closure_candidate	Links to	AIE-E004

Reviewer packet

Service recovery exception review required: CRM/order/billing/support notes are green, but fresh authoritative telemetry contradicts the business state. Do not close; open human exception review.

Block reason	source_contradiction
Rendering status	structured_packet_ready

Recommended actions

Core proof: same green business systems, different authoritative evidence, different route.

Missing/stale evidence routes to telemetry verification. Fresh contradiction routes to human review. The raw agent recommendation, final policy decision, reviewer packet, and audit chain are visible.
